Summary

AI/ML Engineer specializing in **LLM systems, agentic AI, retrieval-augmented generation, and production ML infrastructure**. Experienced in designing multi-agent systems, model evaluation pipelines, tool-calling systems, and low-latency multimodal AI applications using Python, LangGraph, LangChain, Gemini, and Google Cloud technologies.

Experience

Dentsu Bengaluru, India
Gen AI Engineer *May 2026 – Present*

- Designed and implemented **multi-agent AI systems** using **Google ADK, Gemini, LangGraph, and tool calling**, decomposing complex workflows into specialized agents for planning, retrieval, reasoning, and execution.
- Built a **real-time AI voice assistant** integrating streaming speech-to-text, LLM inference, and text-to-speech; optimized asynchronous inference and audio processing for **sub-second transcription latency** in local deployments.
- Developed an **AI video generation platform** using **Gemini, Veo, Imagen, and agentic workflows** to automate creative brief analysis, storyboard generation, asset orchestration, and scene-level generation.
- Implemented **RAG pipelines, vector retrieval, structured tool calling, and cloud storage integrations** to provide agents with grounded context and reliable access to enterprise data.
- Developed an AI system for analyzing **RFP documents** and generating solution architectures, infrastructure recommendations, SLAs, and cost estimates using multimodal LLMs and agent-based orchestration.

BusinessNext (Acidaes Solutions Pvt. Ltd.) Noida, India
AI Engineer *Jan 2025 – Apr 2026*

- Developed and deployed **LLM-powered agents** for CRM automation, QA generation, sprint management, and enterprise workflow orchestration using **LangChain** and custom agent frameworks.
- Fine-tuned **LLaMA and Mistral** models for structured tool calling, improving argument prediction accuracy by **30%** and enabling reliable execution of CRM operations.
- Built a centralized **LLM evaluation and monitoring platform** using **DeepEval**, measuring hallucination, latency, safety, relevance, and instruction-following metrics across production models.
- Integrated **Guardrails-AI** and telemetry pipelines for runtime validation and agent observability, reducing incorrect tool executions by **40%**.
- Architected and implemented **8+ multi-agent workflows**, exploring task delegation, agent routing, tool selection, and orchestration strategies for enterprise automation.

Technical Skills

Programming: Python, SQL, Pandas, NumPy, PyTorch, Scikit-learn

Machine Learning & LLMs: LLM inference, fine-tuning, RAG, embeddings, prompt engineering, evaluation, multimodal AI, structured generation, tool calling

Agentic AI: LangGraph, LangChain, Google ADK, multi-agent systems, agent orchestration, planning, routing, tool execution

AI Infrastructure: FastAPI, Docker, MLflow, Kafka, vector databases, REST APIs, asynchronous processing, model serving

Models & Platforms: Google Gemini, Veo, Imagen, LLaMA, Mistral, Hugging Face Transformers, Vertex AI, Google Cloud

Engineering: Git, Linux, distributed workflows, API design, observability, CI/CD, Agile/Scrum

Education

CHRIST (Deemed to be University), Bangalore, India – Master of Computer Applications Jul 2023 – Apr 2025

Vellore Institute of Technology (VIT), Vellore, India – Bachelor of Computer Applications Jul 2020 – Apr 2023

Certifications

Google Cloud – Inspect Rich Documents with Gemini Multimodality and Multimodal RAG Apr 2025

Google Cloud – Build Real World AI Applications with Gemini and Imagen Apr 2025

Google Cloud – Develop GenAI Apps with Gemini and Streamlit Apr 2025

Google Cloud – Prompt Design in Vertex AI Apr 2025
